

UNDER CONSTRUCTION

Crews focusing on excavation, bridges

Construction activity is hard to miss in Rialto and San Bernardino, with crews moving dirt, building bridges and relocating utilities along the freeway corridor.

Roadway excavation has been underway between Riverside Avenue and the Lytle Creek Wash. Crews also have been moving dirt for embankment work on the bridges at Pepper Avenue in Rialto, as well as the bridges at Lytle Creek bridge and California Street in San Bernardino.

Concrete foundation construction is taking place on the Lilac Avenue pedestrian bridge and the Cactus Avenue bridge, both in Rialto.

A temporary detour road opened last week just east of California Street along Highland Avenue. This is allowing east-west travel to continue while crews build the Highland bridge in San Bernardino.

A grader smooths out newly placed dirt south of Highland Avenue near California Street in San Bernardino.

Highland Avenue to be closed at night through May

Highland Avenue will be closed at night from Riverside Avenue to Macy Street for earthwork activities.

The closure will be in effect from 8 p.m. to 5 a.m. and last through late May. Drivers should use California Street, Baseline and Riverside Avenue as detour routes.

This section of Highland has been closed at night since April 11 for utility relocation. The continued closure will allow crews to work near the Vulcan Materials plant.

Students told to stay out of construction sites

"Play it safe and stay away from construction sites," SANBAG staff is telling students in Rialto and San Bernardino schools near Route 210.

Through assemblies and lunch-time information booths, students from kindergarten to grade 12 are learning the physical dangers and consequences of trespassing where the freeway is being built. Homework, brochures and pencils help reinforce the message.

Laura Muna Landa from the Route 210 Public Information & Safety Program distributes safety materials to students at Martin Luther King Middle School.

State Street storm drain work starts

Work has started on the first stage of the State Street storm drain system in San Bernardino.

Crews are installing 10-foot diameter pipe near Hanford Street, which requires the closure of State Street south of Highland through mid-May. Once this section is complete, work will continue along State, pending utility relocations.

The storm drain will prevent freeway flooding and improve drainage on local streets.
